

Ekomujeres México – Suecia

(Ecology for women in Mexico and Sweden)

The Society “Ekomujeres México – Suecia” started in 2008 with the purpose to create a network between women in Mexico and Sweden who were and are involved in different environmental topics.

During two years this Society has received funding from DKG Educational Foundation to give women in Mexico, who earlier not had access to computers and internet, the opportunity to exchange experiences and knowledge in fields like protection of nature, education in environmental topics and selfsupport. The project is very much appreciated and has already had a great impact in the different groups. Participating women like Otomí and Maya are from very very divers parts from Mexico when it comes to nature , culture and their possibilities for education. The goals of the project is to strehngthen the women both individually and groupwise.

This will be acheived by creating educational opportunities mostly led by the women themselves.
